The React E-commerce Project

- React E-commerce Project

This is Some packages and instructions to follow

Client Side

npm install will be required to install all node modules 1 - npx create-react-app client to create the react app 2 - npm install react-router-dom 4 - Material ui is been used instead of font-awesome - npm install @mui/icons-material @mui/material @emotion/styled @emotion/react 5 - for bootstrap - cdn link or npm install react-bootstrap

For running

- need to run the npm install to install the all packages in the client folder

- then to run it use the - npm start

functionality

- This is A static Website - with the ui using bootstrap

- it has routing , sliders , responsive design , and a cart modal to show the the cart

Links

netlify overview link - netlify link - ["https://react-ecommerce-project-abhyanshu.netlify.app/"]

github link - tried to upload form github to netlify github link - ["https://github.com/AbhyanshuPandeyji/React-Ecommerce-Project.git"]

you can reference to the Oliver the Dev for the reference of this clone.

The Start

- client - frontend folder

The Basic Structure

1 - we have 5 pages Home Categories/Products Single Product About us Contact us

2 - we are gonna use the RouterProvider for the Rendering in return

3 - we have the same navbar and footer so we are gonna have the layout it will include the Outlet component to render our pages it will be between the Navbar and the Footer

```
layout = (

)
```

front end ui complete

- sass doesn't work for me so the pure css
- know how to choose classes for the styling and choose it wisely and effectively

component created

- navbar - the navigation
- cart - the items in the modal
- contact - contact/email letter line
- feature - feature section of the page where we see the special products
- list - to see the products of items in the products page
- footer - the multiple line no links footer
- slider - the main home page slider with minimal js and state management
- category - the page where we go to specific category of products based on filters
- card - the container of the products card / section card

pages created

- Home - includes - category , feature , contact
- Products - includes the all products with the selection to choose from the filters present
- product - a single product page with the images and the right side of same old add to cart section
